🔗 GitHub: | LinkedIn:

PROFESSIONAL SUMMARY

DevOps & Site Reliability Engineer with 3+ years of hands-on experience in building and managing CI/CD pipelines, hybrid infrastructure (On-Prem + Cloud), and production systems. Strong expertise in automation using Bash, Python, and Ansible, with proven experience in reducing manual deployments, improving release frequency, and handling production incidents with rollback strategies.

Experienced in AWS (primary) and Azure (secondary), with a solid understanding of backend systems, API deployments, and database optimization. Adept at bridging the gap between development and operations by debugging deployment-level backend issues and ensuring reliable system performance across environments.

PROFESSIONAL EXPERIENCE

VARUN GROUP

DevOps Engineer / Site Reliability Engineer

Jan 2025 – Present

Project: Varun Management System (VMS), V-Promise, HRMS, EAM, VMS-Audit, MMS, Cosec-Backend. (2 tier applications)

- Designed and implemented CI/CD pipelines using Jenkins, GitHub Actions, GitLab CI/CD, and Bitbucket Pipelines across DEV, QA, UAT, and PROD environments
- Automated deployments using Bash and Ansible, enabling branch-based deployments and reducing manual intervention
- Built and managed hybrid infrastructure (On-Prem + AWS), including migration support and environment setup
- Implemented release governance with branch protection, approvals, tagging strategies, and rollback mechanisms
- Developed cron-based automation for health checks, database backups, cleanup tasks, and alert notifications
- Managed production incidents, performed root cause analysis (RCA), and executed Git-based rollback strategies
- Deployed and supported applications built with Node.js, Python, PHP, Java, React, and Flutter
- Integrated SonarQube and Nexus for code quality and artifact management
- Implemented RBAC and secure access control for production systems
- Key Achievements:
 - Reduced deployment time by transitioning from manual releases to automated CI/CD pipelines
 - Increased deployment frequency in DEV environments, improving testing speed
 - Achieved zero-downtime deployments with rollback strategies
 - Improved system reliability through proactive monitoring and alerting

AMUNIK SOFTWARE SOLUTIONS PVT. LTD. – Vijayawada

DevOps Engineer (Remote)

Mar 2023 – Dec 2024

Project: JPF, VR-Garage, Clokam, HRMS, EAM.

- Managed AWS infrastructure including EC2, ALB, Auto Scaling, S3, IAM, RDS, and Route 53
- Configured secure IAM roles and access policies for developers and services
- Built and maintained CI/CD pipelines using Jenkins and GitHub Actions
- Supported Docker-based application deployments
- Configured monitoring using CloudWatch, Prometheus, and Grafana dashboards
- Set up alerting systems using email-based triggers for failures and system anomalies
- Handled production incidents and ensured high availability

Key Contributions:

- Designed monitoring dashboards and alerts for proactive failure detection
 - Supported infrastructure scaling and networking setup including NAT and private/public architecture
-

PIVOTAL SOFTWARE SOLUTIONS PVT. LTD. – Visakhapatnam

DevOps Intern (Remote)

Feb 2022 – Feb 2023

- Worked with AWS services including EC2, VPC, IAM, and Linux servers
 - Assisted in CI/CD pipeline setup using Jenkins
 - Supported application deployments and environment configurations
 - Gained hands-on experience through practical implementations and after-hours learning
-

TECHNICAL SKILLS

DevOps & SRE:

CI/CD Pipelines, Release Management, Rollbacks, Incident Management, RCA, High Availability

Cloud & Infrastructure:

AWS (EC2, VPC, IAM, S3, RDS, ALB, ECR, Route 53, CloudWatch)

Azure (Basic Production Experience)

Hybrid Infrastructure (On-Prem + Cloud)

CI/CD & Build Tools:

Jenkins, GitHub Actions, GitLab CI/CD, Bitbucket Pipelines

Automation:

Bash, Python, Ansible, Cron Jobs

Containers & Orchestration:

Docker, Kubernetes (Hands-on Practice)

Monitoring & Observability:

CloudWatch, Prometheus, Grafana

Backend & Databases:

Node.js, Python

MySQL, PostgreSQL, MongoDB

Pg Bouncer (Connection Pooling & Optimization)

Servers & OS:

Linux (Ubuntu, RHEL, CentOS), Nginx, Apache, Tomcat

PROJECTS

- Personal Portfolio (GitHub Pages)
Hosted a static portfolio website using GitHub Pages
- Safety Application (In Progress)
Developing an AI-assisted safety system with backend integrations and automation
- Database Automation & Migration Scripts
- Automated DEV → QA → UAT → PROD migrations
- Built backup and restore systems
- Implemented full database recovery workflows
- Zero Downtime Deployment System
Designed deployment strategies with rollback support ensuring service continuity

ACHIEVEMENTS

- Restored critical production databases after accidental deletion using backup strategies
- Implemented zero-downtime deployment pipelines with rollback mechanisms
- Automated deployment and database workflows, reducing manual effort significantly
- Optimized PostgreSQL performance using Pg Bouncer and configuration tuning

AI-ASSISTED DEVELOPMENT

- Used AI tools (ChatGPT, GitHub Copilot, Claude, Gemini) for debugging, automation, and CI/CD improvements
 - Applied AI for log analysis, script optimization, and architecture validation without exposing sensitive data
-

TOOLS & TECHNOLOGIES

AWS, Azure, Jenkins, GitHub Actions, GitLab CI/CD, Bitbucket, Docker, Kubernetes, Ansible, Bash, Python, Node.js, React, Flutter, PHP, Java, MySQL, PostgreSQL, MongoDB, Prometheus, Grafana, CloudWatch, Nexus, SonarQube, Jira, Postman, Linux

EDUCATION & CERTIFICATIONS

- MCA – Vignan's University, Guntur
 - AWS Certified Developer – Associate
 - DevOps Hands-On Training
-

DECLARATION

I hereby solemnly affirm that all details provided above are true to the best of my knowledge and belief and that all the time.

V. Pavan Kumar
